UI/UIX

CARRER OBJECTIVE

I am a discipline and result oriented person. I'm open to learn new things and also be impactful. Proficient in implementing highly responsive user interface components by deploying REACT concept, integration of API and Server side for dynamic websites, ability to implement readable and re-useable codes. Great leadership mindset that enables me work with team.

PROJECTS

- **E-Commerce Platform:** I developed an e-commerce platform for car sales. Customers can make purchase and also consult a mechanic directly from the platform. The project was created using ReactJS. Hosted on Netlify.
- **SMART:** Headed a team of three (3) that developed a web solution for developers known as SMART. The platform is built to connect developers and prospective clients. This will help create jobs for developers and also help clients to developed solutions they need to scale their products. i designed the user signup/signin, developer testing system, developers' profile/edit profile, display profile and team collaboration on the backend. The platform was developed using ReactJS, Redux, NodeJS, ExpressJS and MongoDB.
- **Estate Management Template:** I designed a template for an estate management that enable users to share apartment, rent and purchase a home. This project was created using ReactJS. Hosted on firebase.
- **Todo App:** I developed a todo app, that enables user keep track of their activities and also know when each task has been completed. This project was created with css, data storage and hosting was done using firebase.
- **QuestionnaireApi:** created a questionnaire api for a company that short test staffs knowledge and help them acknowledge their progress and a more interactive experience. The platform was developed using Nodejs, Express, Mongoose, Heroku, jsonwebtoken, validator, bcrypt and dotenv.
